

Your Restaurant, Fully Digital

We have built a modern, end-to-end digital system tailored specifically for Cooker's Delight. It connects your customers, your kitchen staff, and your management — all in one platform.

■ Public Website	■ QR Table Ordering	■ Admin Dashboard
Customers discover your menu, branches, and book tables — anytime.	Guests scan, order, pay, and track their food — right at the table.	Your team manages orders, menu, and branches from one place.

For Your Customers

Browse Your Menu, Anywhere

Customers visit your website from any phone, tablet, or computer. They can filter dishes by category — Ghanaian, Nigerian, Fast Food, Snacks, Sides, and Continental — or search for a specific item. Every dish shows its price, prep time, and a beautiful photo.

Reserve a Table Online

A guest can book a table from your website in under a minute. They pick a branch, choose a date, select the number of guests, and confirm with their name and contact. Available time slots update automatically based on your branch hours.

Dine-In QR Ordering — No App Needed

Every table has a printed QR code. A guest scans it with their phone camera. The menu opens instantly in their browser — no download, no account required. They browse, add items to their cart, and place the order. Payment is handled securely through Paystack, Ghana's trusted payment gateway.

Live Order Tracking

After paying, customers see their order status update in real time — **Pending** → **Received** → **Preparing** → **Ready** → **Served**. No more 'how long is my food?' They always know exactly where their order stands.

Find Your Branches Instantly

The Branches page shows all four Accra locations — Kaneshie, Circle, East Legon, and Swan Lake — with addresses, phone numbers, WhatsApp links, and live Open/Closed status.

WhatsApp Ordering

Customers can also tap "Order Now" on the menu page and get a pre-filled WhatsApp message sent straight to your team — perfect for takeaway and delivery requests.

For Your Team & Management

Live Dashboard — Know Your Business at a Glance

The admin dashboard shows today's orders, total revenue, tables occupied, and pending orders — all updating in real time. Your manager logs in and sees exactly what's happening across the restaurant.

Order Management

Every incoming order appears on the Orders page. Staff can view the customer's items, table number, and total. Updating the order status is one click — and the customer's screen updates instantly.

Menu & Category Control — No Developer Needed

Add a new dish, update a price, upload a photo, or disable an item — all from the admin panel. Organise your menu into categories and set the order they appear in.

Table & QR Code Management

Add or remove tables per branch. Each table gets a permanent QR code you can print. If a card is lost, the QR link remains the same — no reprinting system needed.

Branch Management

Edit the address, phone number, operating hours, and open/closed status for each of your four branches from one screen. Changes go live immediately on your website.

Announcements

Publish a promotion, a public holiday notice, or a new dish announcement. It appears as a banner on your website the moment you save it. Turn it off just as quickly when the promotion ends.

Settings — Full Control

Restaurant Info	Update your name, tagline, social media links, and footer text.
Order Options	Enable or disable dine-in, pickup, or delivery independently.
Payments	Manage your Paystack keys and currency settings.
Notifications	Get email or SMS alerts the moment a new order comes in.
Appearance	Set your brand colours, logo, and hero image. Flip on maintenance mode anytime.
Prep Times	Set per-dish preparation times so customers always get accurate estimates.
Order Statuses	Customise the status names and colours that appear in the kitchen flow.

How It All Works — Key Flows

Dine-In Flow (QR Ordering)

1 Scan QR	2 Browse	3 Order	4 Pay	5 Track
-----------	----------	---------	-------	---------

Guest scans table QR with phone camera	Menu loads instantly in the browser	Add items and place order	Checkout via Paystack (card, mobile money)	Live status updates until served
--	-------------------------------------	---------------------------	--	----------------------------------

Online Customer Flow (Website)

1 Visit Site	2 Explore	3 Act	4 Confirm
Open the website on any device	Browse menu, gallery, branches, reviews	WhatsApp order — or book a table	Receive booking confirmation

Admin Flow

Login	Dashboard	Orders	Manage	Configure
Secure admin login with lockout protection	See live KPIs — orders, revenue, tables	Update order status in one click	Edit menu, branches, tables, announcements	Adjust settings anytime — no developer needed

Why This System?

No App Download Everything runs in the customer's phone browser — nothing to install.	Secure Payments Paystack handles all transactions. Payments are verified server-side — no fraud risk.	Real-Time Kitchen Updates Customers know where their food is. Staff know what's pending. No more guessing.
Works on Any Device Phone, tablet, laptop — the website and ordering system adapt to every screen size.	One Platform, Four Branches All your locations, menus, tables, and orders managed from a single admin panel.	Always Up to Date Your website reflects your latest menu, hours, and announcements the moment you save.
Built for Ghana Paystack integration supports card and mobile money payments used by your customers.		

Ready to Go Live?

The platform is built, tested, and ready to serve your customers across all four branches. We are here to walk your team through it, train your staff, and keep things running smoothly.
